Pre Engineered Buildings

Pre Engineered Steel Building are the fastest System of building Industrial Metal Buildings. Pre Engineered Steel Buildings are intended primarily for commercial, industrial or institutional occupancies. They feature a structural steel framework of primary and secondary members (rigid frame, purlins and girts) on which cladding and roofing components are attached. The complete building system is pre-engineered to facilitate easy production and assembly on site. and assembly on site.

Components of Pre Engineered Buildings

- Primary Framing System
- Secondary Framing System
- Roof Sheeting
- Wall Cladding
- Accessories

With a view to meet the increasing needs of modern era, Pre-Engineered building of excellent design consisting of light weight steel components is manufactured to suit customer requirement. PEB system is applied for Construction of new and modern Industrial building structure, industrial sheds, canopies, ware houses, etc. Application of PEB Systems is considered as highly cost effective.

we are having required facility to design, fabricate and erect the pre engineered buildings, we have all MIG and Arc Welding machines, Sub arc Welding Machine, plate cutting machines, beam setting welding jigs, Material Handling system, Airless painting system etc

We have executed many steel Peb buildings in and around Bangalore .we can provide you complete civil and steel building solutions
